Evidence · Live publication library

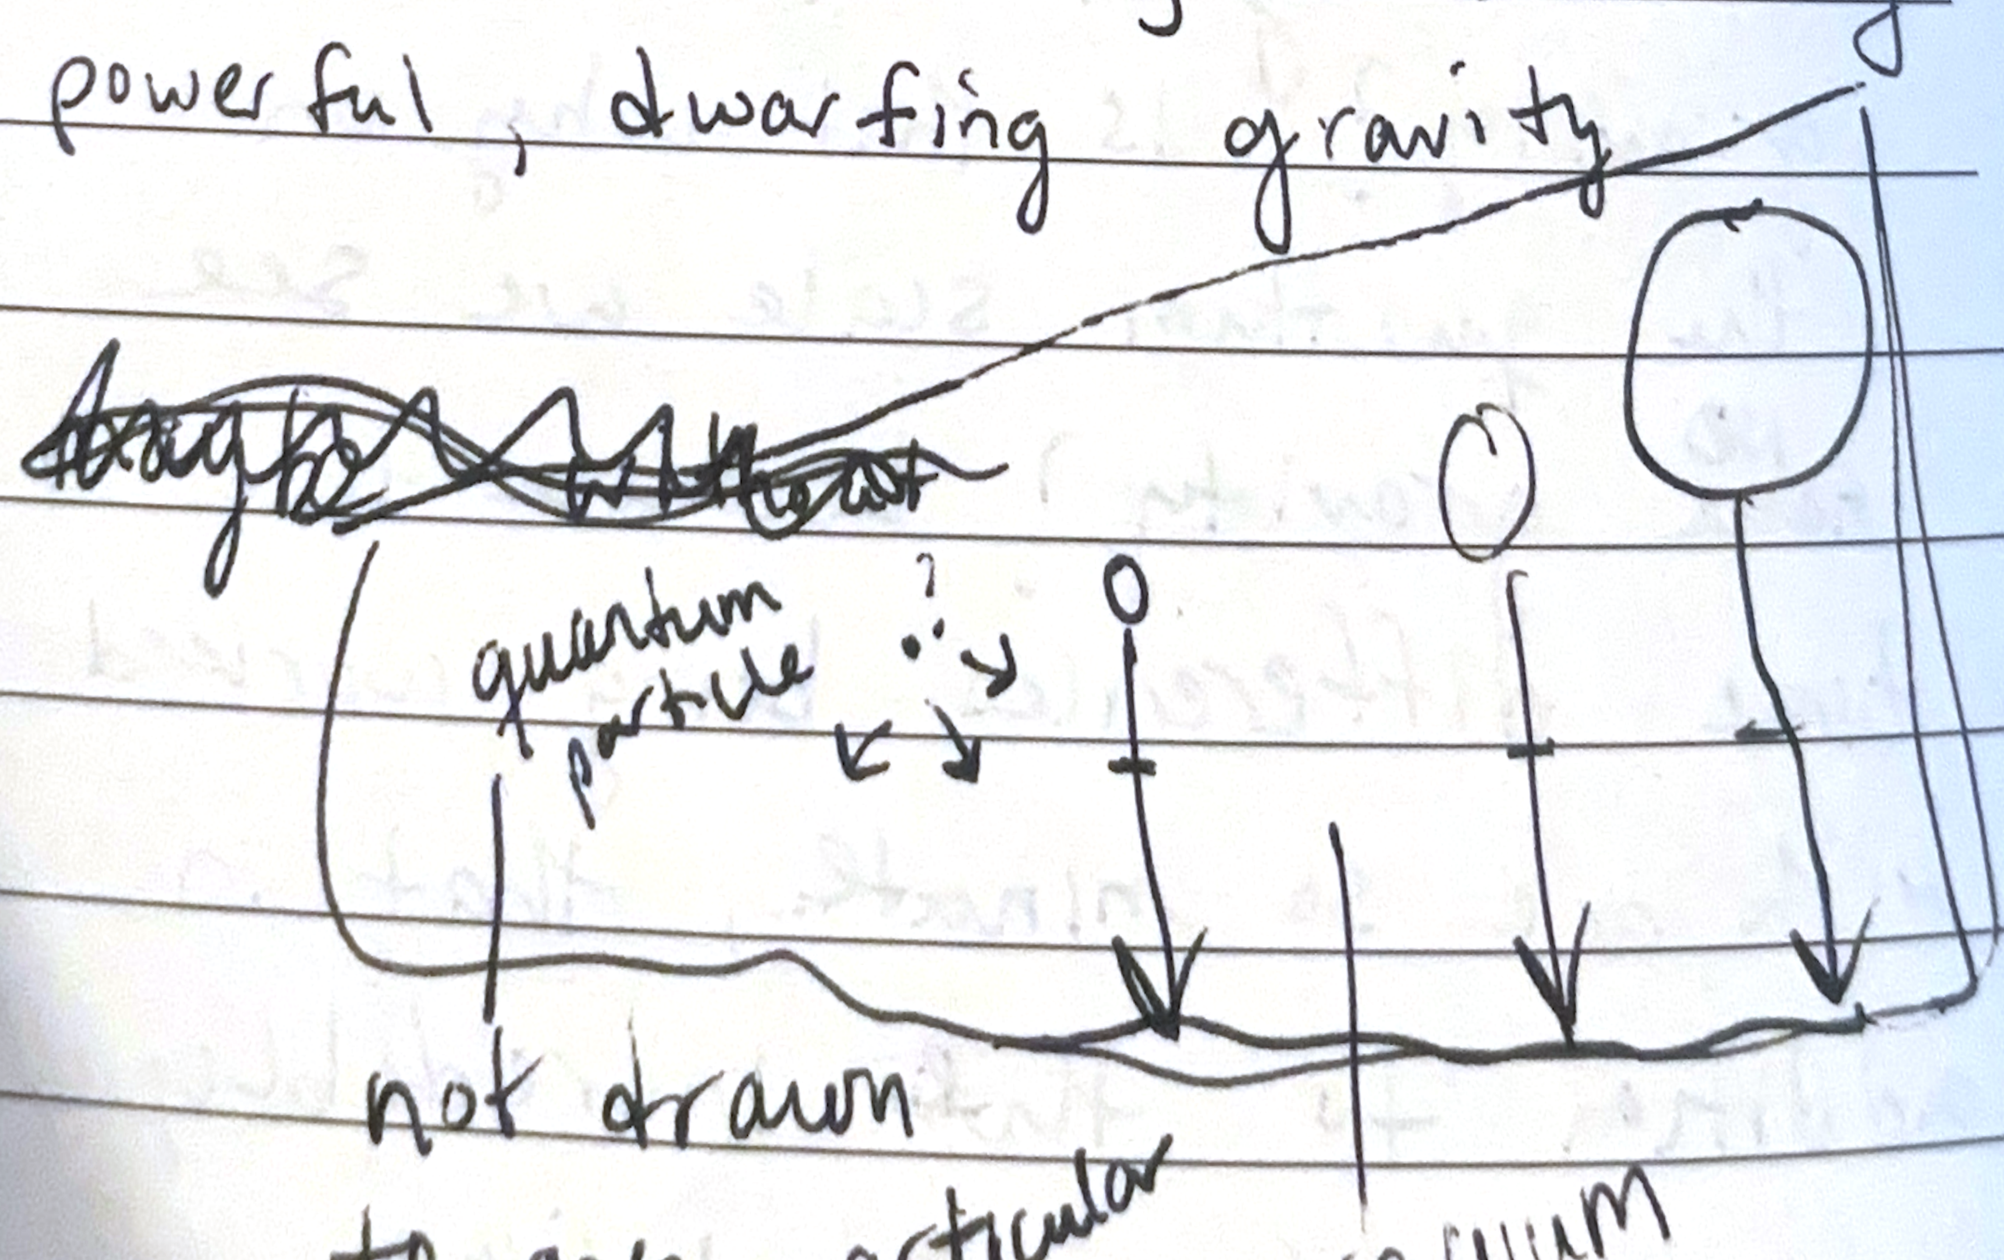
any chimp can play human for a day -Rilo Kiley-

4/08

It seems ~~[illegible]~~ egocentric to think that our perception influences Nature, so maybe it is Nature herself who determines when something is organized enough to actually begin its journey through time.

TOO poetic, assumes "higher power"

Em forces could just be really powerful, dwarfing gravity



4/08

Sketch with spacetime drawn

out on the previous page

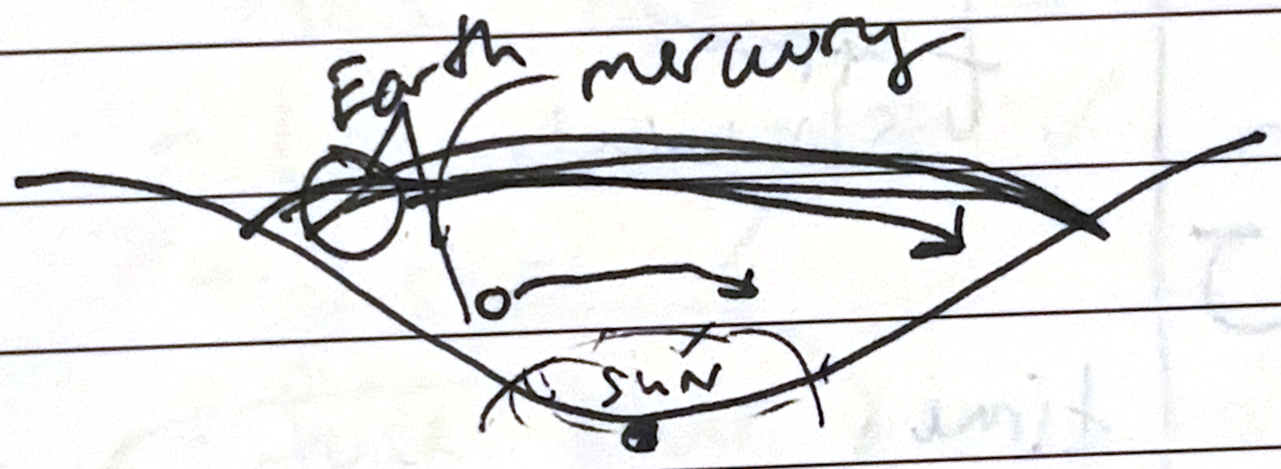
it is apparent that at "the bottom"

there must be a point of singularity.

where time stands still, gravity

is at a maximum. As

is the case for a blackhole



gravity and spacetime play out

on a massive scale.

at the quantum scale w/

probability amplitudes God

KINDA plays dice, but it is a

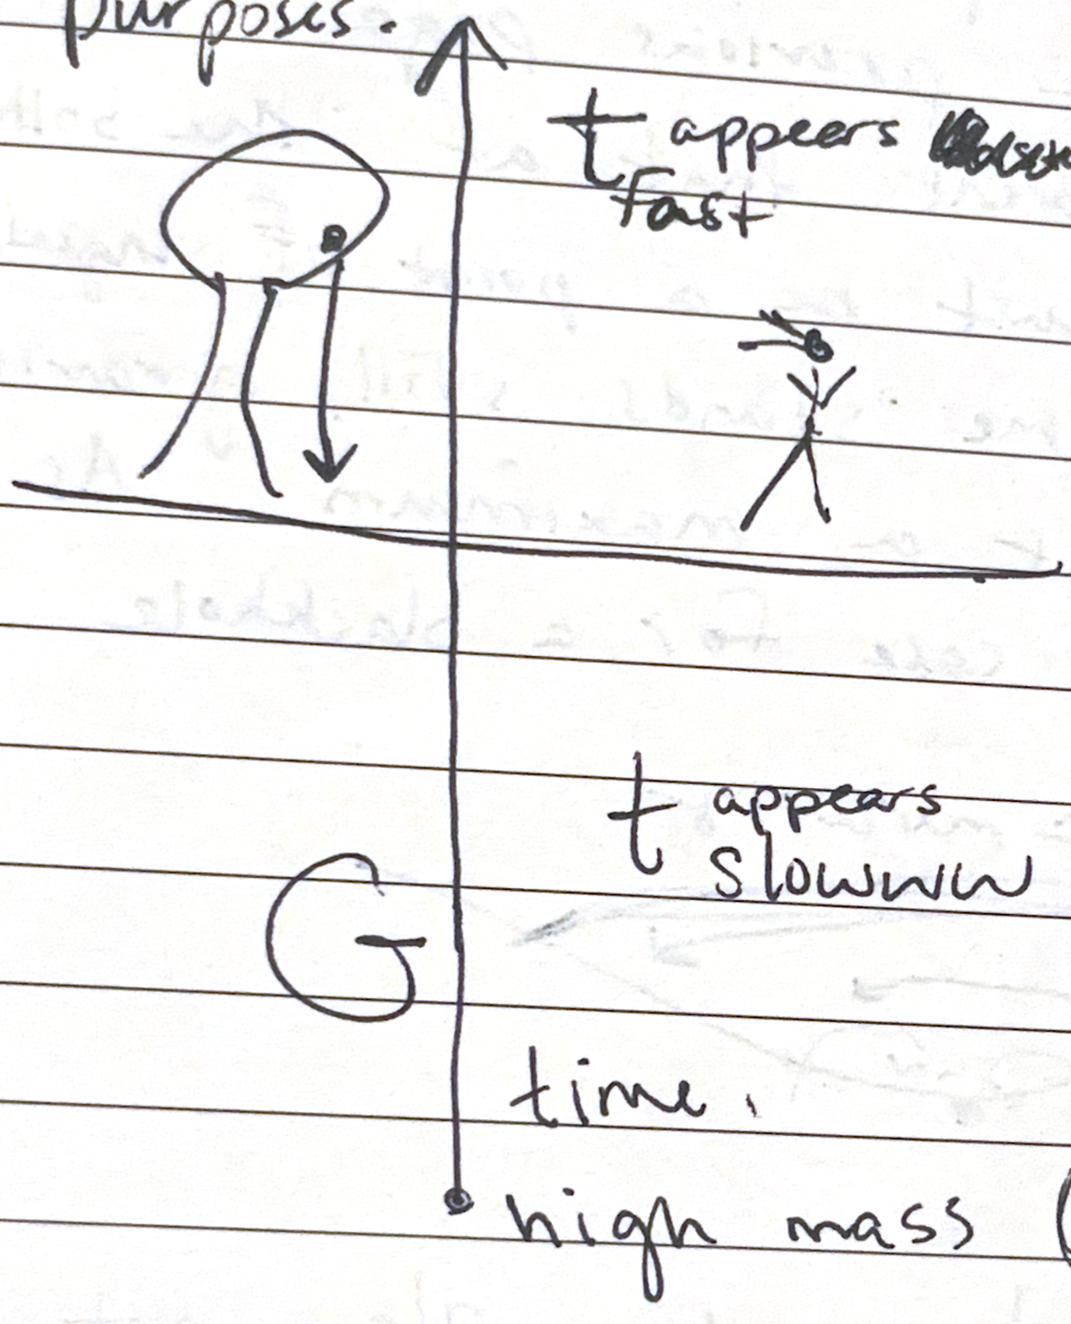
game that makes sense (Feynman describes well)

When the probability arrows begin

getting really redundant you leave the

4/09

quantum world, for all intents and purposes.



time radiates out from all mass
